WEEKLY ANNOUNCEMENT

ENGINEERING DESIGN II

Tasks for the Week of 28.09.2026 – 02.10.2026

The tasks to be completed this week for the Engineering Design II course are listed below. To keep the project process on track, team formation, project selection, the TÜBİTAK 2209-B Research Proposal Form, and the field research are expected to be completed in line with the guidelines below.

Key Reminders

- Presentation files will be uploaded to the **Assignments** section of the system.
- The completed **TÜBİTAK 2209-B Research Proposal Form** will also be uploaded to the system.
- Teams must bring **their own laptops** on presentation day.
- For Projects 01, 03, 04 and 05, write your chosen repository in the yellow field on the **"Sign Up"** sheet of the Excel file.

1. Team Formation and Project Selection

- **Finalize your project teams** this week.
- **Presentation dates and times** are listed on the **"Project Presentation Schedule"** sheet of the shared Excel file. Teams are expected to present in their assigned time slot.
- Choose **one of the 9 project directions**.
- Within your chosen direction, define **your sub-topic, problem area, and the boundaries of your project scope**.

Teams Choosing Project 01, 03, 04 or 05

Teams choosing one of these projects must write the repository they will work on in the **yellow field on the "Sign Up" sheet** of the Excel file.

Important: Each team will work on a different repository. Check the existing entries in the Excel file before making your choice. A repository already chosen by another team cannot be selected again.

Project	Candidate Repositories
Project 01	IBM CICS Banking (CBSA) · AWS CardDemo · Microsoft eShopModernizing
Project 03	OWASP Juice Shop · OWASP WebGoat · OWASP crAPI
Project 04	DVWA · OWASP Juice Shop · Damn Vulnerable RESTaurant · OWASP NodeGoat
Project 05	Hoppscotch · Excalidraw · Joplin · Memos · BookStack

2. TÜBİTAK 2209-B Research Proposal Form

The shared **TÜBİTAK 2209-B Research Proposal Form** will be prepared this week based on your chosen project topic and **uploaded to the system.**

Sections to Prepare

The following sections of the research proposal are expected to be prepared according to your project topic:

- Aim and objectives
- Innovative aspect and technological value
- Methodology
- Work-time schedule
- Risk management and Plan B
- Research facilities
- Industry-oriented outputs and broader impact
- Budget
- References

3. Next Week's Presentation – Field Research

Next week, each team will present the **field research** they have conducted on their chosen project topic. Presentations are expected to cover the following headings.

Topic and Problem Definition

- What is the chosen project direction?
- What is the defined sub-topic?
- What is the core problem to be solved?
- Why is solving this problem important?

Literature and Existing Work

Previous academic and technical work in the chosen area should be reviewed. In particular, evaluate:

- Academic publications
- Existing research
- Methods used
- Proposed technical approaches

Similar Tools and Systems

Existing solutions with similar goals, in industry or the open-source ecosystem, should be researched and evaluated for your project in terms of their:

- Strengths
- Limitations
- Missing aspects

Analysis of the Selected Repository

Mandatory for teams choosing Project 01, 03, 04 or 05. The selected repository should be analyzed in terms of:

- Software architecture
- Technology stack
- Core components and modules
- Notable technical features
- The parts or components your team plans to work on

Technologies and Tools to Be Used

State what you plan to use in the project:

- Methods and techniques
- Programming languages
- Libraries
- Frameworks
- Development and testing tools

Team Contribution and Project Scope

Clearly show how your project will differ from existing work. In particular, define:

- The original contribution of the team
- Features to be developed
- Work included in the project scope
- Work deliberately left out of scope

Annotated Source List

The presentation must include **at least 5 academic or technical sources**. Bibliographic information alone is not sufficient; each source must include a **short summary or relevance note** explaining its importance to the project.

Repository URL

Each team must have created its own repository for the project. By the presentation date the following must be in place, and the repository link must be shared in the presentation:

- The team repository has been created
- All team members have been added to the repository
- The project's basic folder/file structure is visible

GitHub Projects – Board Setup Research

Teams are expected to research how the following board types are created and configured in GitHub Projects. The basic structure of each board, its purpose, and how it can be used during development should be understood.

- **Iterative Development**
- **Kanban**
- **Bug Tracker**

4. Running the Presentation and the 2209-B Form Together

The field research presentation and the TÜBİTAK 2209-B Research Proposal Form should not be treated as separate tasks. The following work done for the presentation can be used directly in the **"Innovative Aspect and Technological Value"** and **"Methodology"** sections of the 2209-B form:

- Literature research
- Review of existing systems
- Evaluation of technical methods
- Defining your project's original contribution

We therefore recommend conducting your research in a way that supports both the presentation and the research proposal.

5. Submission and Presentation Day

- **Presentation files** will be uploaded to the **Assignments** section of the system.
- The completed **TÜBİTAK 2209-B Research Proposal Form** will also be uploaded to the system.
- Teams must bring **their own laptops** on presentation day to give their presentations.
- Presentations will take place in the time slot assigned to your team on the **"Project Presentation Schedule"** sheet.

Best of luck.
